IAR SYSTEMS Momentum hit pause

Softening macro has squeezed IT software spend and organic growth at IAR Systems and its peers. Short-term, we expect muted earnings momentum, but are optimistic for its SaaS launch in 2025e and note subscriptions represented 11% of net sales in 9M 2024, growing by 176% YOY. Having lowered our estimates, we reiterate our SEK160–240 fair value as we roll our valuation base to 2025e and see support from, among other things, further buybacks and recent insider activity.

Q3 was light, with 1% organic sales growth YOY (we expected 11%) as recurring revenues (~50% of sales) showed healthy 10% organic growth YOY, largely offset by - 7% organic growth in upfront licences amid softening end-markets and a tough YOY comparable. Despite ~50% higher capitalisation of R&D than in recent quarters, the adj. drop through was 30% in Q3 versus 100%+ in previous quarters, which led to adj. EBIT 6% below our forecast (28.1% margin, down 0.1%-point YOY). 36% cash conversion (10.2% FCF margin) resulted in net cash of SEK115m at end-Q3; while IAR Systems has bought back shares worth SEK76m since Q3 2023 it has only utilised 7% of its current buyback mandate.

We have cut our 2024e adj. EBIT by 11%, 2025e by 6% and 2026e by 3% to factor in positive FX, the soft Q3 results and Q4 outlook. We await greater clarity on IAR Systems' SaaS launch in 2025e, although we expect an optical headwind to net sales growth, pressuring profitability. However, investors to ultimately appreciate the transition medium-term from: 1) more predictable (less lumpy = de-risked growth), recurring and ultimately profitable revenue streams; and 2) enabling faster customer expansion and user adoption by lowering the upfront cost of deployment.

SEK160–240 fair value reiterated corresponding to a 2025e EV/EBIT of 15–23x. We like IAR Systems' progress to becoming a platform business, profitable growth and solid adj. net cash position (10% of its 2024e market cap), offering prospects of generous capital allocations; the defensive qualities of c50% of revenues being recurring; the optionality in RISC-V; and the ambition to expand its embedded systems market.

Overview

Source: FactSet, DNB Markets

Downside risks to our fair value

- Weakening of the embedded systems developer community (C/C++ language difficulty, cultural shifts in the workforce, low-level code abstraction, etc.).
- Competitive advantages disrupted by open-source alternatives or stronger commercial technologies.
- New product developments are too costly and might not translate into sales, which could make investors lose trust in the company's ability to resurrect its organic growth profile.
- IAR Systems is highly sensitive to a strengthening of the SEK (particularly against the USD, EUR, and JPY).

Sales bridge 2023-2025e (SEKm)

Source: DNB Markets

DNB Markets estimates

- We view IAR Systems as a market leader in a niche industry (ensuring high code quality in embedded software and programming secure devices for the Internet of tomorrow), with the potential to accelerate organic growth to above its targeted 10–15% from new product launches (for which SEK500m+ of R&D investment has already been taken, and SEK400m+ has been written down).
- IAR Systems' management team has taken the necessary steps to modernise the business over the past two years. We believe IAR Systems is in the best shape operationally in the six years we have covered the company.

Source: DNB Markets

Valuation methodology

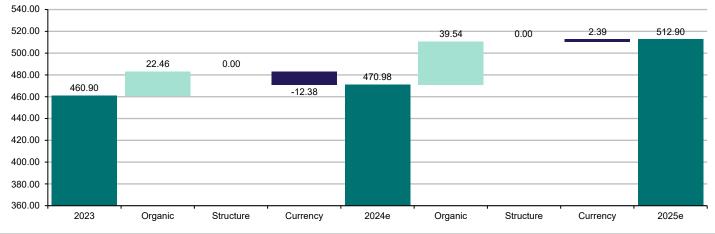

- We continue to base our fair value on a DCF, IAR Systems' historical valuation multiples, and a peers' multiples regression analysis (methodology unchanged).
- On our estimates, IAR Systems is trading at a 2025–2026e P/E of 16– 14x, EV/EBIT of 11–9x, and EV/sales of 2.9–2.5x.

Source: DNB Markets

Source: DNB Markets

Upside risks to our fair value

- The company over-achieving on its financial targets (particularly 10–15% organic growth).
- Successful traction of its new offerings (IoT security, RISC-V, 64-bit, etc.) could offer potential shareholder value creation beyond our fair value.
- IoT security legislation that requires identity to be built into microcontrollers.
- SaaS transition would support the revenue mix, lessen the cyclicality, and enhance the investment profile.
- Participation in industry consolidation owing to the strategic importance of development tools.

Company overview and SWOT analysis

Company description

- IAR Systems is a world-leading provider of commercial software tools and services for programming processors in embedded systems (computer hardware and software designed for a specific function) that enable the development and ensure the code quality of digital products. Its solutions support 15,000+ processors from 200+ chip vendors globally.
- Its professional customers are mainly developers (22,000 active users) at OEMs building these systems for products going into fields such as industrial automation, medical technology, telecommunication, consumer electronics, and the automotive industry.

Source: DNB Markets

Financial targets

Through-the-cycle:

- 10–15% annual sales growth in local currencies (organic).
- EBIT margin of 25%+.

Source: Company

SWOT analysis

Strengths

Niche-market leader with ~40% market share for commercial tools through its integrated development environment (IDE).

Source: Company

Key competitive advantages are: 1) complete toolchain for developers regardless of processor/architecture and independent market position; and 2) superior industrial-quality, as its commercial customers cannot compromise on tools' code performance, reliability (industry standards compliance etc.), user-friendliness, access to support, or time-to-market.

Opportunities

- Early leader in two of the embedded industry's most prominent themes (embedded IoT security and RISC-V).
- Perpetual licences still make up 50%+ of IAR Systems' sales. We prefer subscription-based revenue models versus traditional perpetual licence delivery models, since the SaaS model generates more predictable near-term revenue and cash flow, with, we believe, the potential to become more profitable longer-term (limited further customer acquisition costs).

Weaknesses

IAR Systems has yet to undergo a SaaS transition, which could optically dent revenue growth and profitability.

Source: Company

History of bad capital allocation in search of growth opportunities outside its core Embedded Workbench (~SEK200m Secure Thingz acquisition in 2018).

Threats

- Competitive shift as open-source-based alternatives could gain popularity, as younger generations of developers could be unwilling to pay for licences or be restricted to a single technology from one vendor.
- OEMs and processor manufacturers might prefer high-level tools that can abstract out the lower-level hardware and software in product development.

ESG overview

Sustainability assessment

| | Positive | Negative |
|-----------------------------------|--|--|
| Conclusions | IAR Systems' software-development tools are market-leading in terms of code quality, analysis, functional safety, and security. Its software ensures that the code is in line with industry standards, thereby guaranteeing its reliability when applied. | Data loss or security bugs in the software code could trigger regulatory scrutiny as well as legal costs and reputational damage, hampering its growth prospects. IAR Systems' competitiveness relies greatly on its |
| | Increased IoT security legislation drives demand for its products, as its OEM customers must comply with new security design requirements. | ability to continuously innovate. For this, its highly skilled workforce is a key resource. Failure to attract and retain such professionals could lead to delays in innovation and a loss of market share. |
| Actions being taken by company | Embedded programmers need to protect their code from IP theft and illegal copying, as IoT security issues are becoming increasingly prevalent. Following the acquisition of Secure Thingz, IAR Systems' tools are increasingly linked to sustainability, as they help developers take control of security from inception in the IP throughout the lifecycle of a digital product. | IAR Systems' development tools are the most used in the embedded industry, owing to its leading optimisation technology, comprehensive debugger quality, and renowned technical support. This is confirmed by its loyal customer base (~5% annual customer churn). It has 46,000+ OEM customers and 150,000+ technology users, 95% of which recurring customers, we believe. |
| Key ESG drivers Short-term | IAR Systems' security offering (Secure Desktop Provisioner, Embedded Trust, and C-Trust) ensures that its customers' intellectual property is protected against IP theft, overproduction, and piracy, and that software updates can be managed in a secure fashion. In other words, it creates a secure infrastructure and protects its customers' digital products from sabotage programmes and data intrusion. Examples of customer use cases have included: a leading vending-machine provider, whose IP was stolen (stolen credit card and transaction details); a global white-goods company, whose stolen IP led to twice as many products being manufactured; and a leading door-sensor provider, whose IP was | To stay ahead of the competition, IAR Systems relies heavily on its employees in the development and innovation of new technologies. Following the integration of Secure Thingz, IAR Systems' addressable market has expanded from application development into manufacturing and update management (the entire lifecycle of embedded systems). To keep pace with competition in a larger market, it needs to retain highly skilled software engineers, which could come at a higher cost than its traditional business. An increasingly larger part of IAR Systems could revolve around Cambridge-based Secure Thingz. This could create some corporate cultural challenges versus the Uppsala-based legacy |
| Long-term | stolen internally, which led to direct revenue loss. Regulators are likely to play an active role in the long-term uptake of secure development tools. This should have an impact on programmers' designs, as applications need to remain secure across the entire lifecycle to comply with new legislation. We note legislative initiatives in Europe (UK government, ETSI, ENISA) and the US (California and Oregon IoT Security law, IoT Cybersecurity Improvement Act), and government initiatives across Singapore, Japan, South Korea, China, etc. | Considering its offering of software development tools to over 150,000+ technology users as well as the sensitive nature of the data it handles, IAR Systems is exposed to possible hacking attempts and misappropriation of technological data. |

Summary of positives

Attractive position in a structural growth niche

Sweden-based IAR Systems is a world-leading provider of commercial software tools and services for programming processors in embedded systems (computer hardware and software designed for a specific function) that enable the development and ensure the code quality of digital products. Its professional customers are mainly developers (22,000+ active technology users) at OEMs building these systems for products going into fields such as industrial automation, medical technology, telecommunication, consumer electronics, and the automotive industry. Although the niche for IAR Systems' addressable market is largely undefined, it has said it captures a ~40% market share for commercial tools. We note several prospects for the market to show a mid-to-high single-digit CAGR over the medium term: 1) a continued increase in the number (and complexity) of embedded systems driven by the growth of IoT; 2) demand for reliable and advanced software tools that offer faster time-to-market and a complete development platform; and 3) a lack of software developers, which increases demand for more powerful software-development tools.

Market dynamics benefiting the market leader

In our view, IAR Systems' key competitive advantages stem from: 1) its complete toolchain for product developers across 8-, 16-, 32- and 64-bit processors; 2) its independence, which enables it to support a wide range of design architecture – customers can choose the programming environment and tools according to their own needs, regardless of processor or project, which avoids locking customers into one technical platform (a factor amplified by the global semiconductor shortage); and 3) superior industrial-quality, as its commercial customers cannot compromise on tools' code performance, reliability, user-friendliness, or time-to-market by using inferior technologies, such as open-source alternatives. IAR Systems' solutions create codes that are compact, fast, and stable.

96%+ gross margins ensure high level of scalability

Although IAR Systems' organic growth has averaged 1% in the past five years, we believe the company has a diversified set of growth opportunities that could support its 10–15%+ organic sales growth target in the medium term and an acceleration of its most promising new product launches: 1) migrating its existing 32-bit customers (~80% of 2021 sales) to 64-bit; 2) broader RISC-V adoption; and 3) IoT security taking off. With ~95% customer retention, we believe it could scale up with its existing customer base, which, in combination with 96%+ gross margins, could provide a highly scalable cost structure over the coming years that could add a tailwind to significant margin expansion with high cash conversion.

Early leader in two of the embedded industry's most prominent themes

In 2018, IAR Systems acquired Cambridge-based start-up Secure Thingz, which offers advanced security solutions focusing on IoT. Although we share the company's view about the potential to emerge as an early leader in the embedded systems security market, it has taken IAR Systems several years to find a way to commercially package its award-winning security technology (which led to a SEK116m write-down of intangible assets in 2021, and a SEK262m write-down in 2023). We expect broader adoption in the coming years from secure IP being seen as a business imperative and increasingly stringent security legislation. We are cautiously optimistic about recent customer agreements to provide secure coding in the manufacturing of IoT devices for Secure Thingz. Moreover, the RISC-V ecosystem is maturing (RISC-V foundation members have expanded fivefold since IAR Systems joined in 2018), setting the scene for a potential breakout. Semico and Tractica forecast a ~100% CAGR of RISC-V cores, reaching an estimated 62bn units in 2025 and a ~USD70m–80m RISCV tools market for a 40%+ CAGR to 2025, of which IAR should gain a sizeable share.

Summary of negatives

Possible shift in the competitive landscape

IAR Systems holds leading positions across most processor types, but it still faces a highly competitive environment, particularly from the independent supplier Green Hills Software and Arm's development tool, Kiel, we believe. In addition, the increasingly strategic nature of development tools for many industries could attract competition from disruptive innovators or free, open-source-based alternatives, which are gaining popularity, as younger generations of developers could be unwilling to pay for licences or be restricted to a single technology from one vendor.

Potential weakening of the Embedded Workbench community

According to Slashdata, there were 7.5m active software developers writing in the C/C++ language of the ~27m active developers globally in 2021. However, C++ is relatively hard to master. As developers often understand all aspects of a programming language, the difficulty of the language may affect the future number of C++ developers. We view this as a challenge, especially if we see a wider push from processor manufacturers and OEMs to provide developers with high-level tools that can abstract out the lower-level hardware and software in product development.

Product development could prove too costly and not materialise in sales growth

We believe IAR Systems was underinvested from 2015, which drove a considerable EBIT margin and ROCE expansion up to 30%+ given the inherent scalability of the business model. However, as organic growth abated, IAR Systems underwent the most comprehensive investment phase in its nearly 40-year history, investing SEK500m+ over the past five years in its security offering, 64-bit support, and RISC-V tools. We believe these investments have been the appropriate approach to provide building blocks to take the company to the next level. The pandemic has delayed project designs and, thus, customers committing to new investment decisions, but we have still seen few proof-points indicating that IAR Systems stands to reap the fruit of these investments. Its new management team made a SEK116m impairment of intangible development assets in Q4 2021 and another SEK290m in Q4 2023.

One of the most FX-sensitive stocks on the OMX Stockholm exchange

Although >98% of sales are from markets outside Sweden, we estimate ~40% of the fixed-cost base is denominated in SEK; thus, the company is sensitive to fluctuations in this currency. If the SEK were to strengthen by ~10% against its most important currencies (USD, EUR and JPY) as well as the GBP and KRW, we estimate a ~10% FX headwind to sales and a ~40% headwind to 2025e EBIT.

SaaS transition still ahead for IAR Systems

We prefer subscription-based revenue models to traditional on-premises perpetual licence delivery models, as the SaaS models generates more predictable near-term revenue and cash flow, with, we believe, the potential to become more profitable longer-term. We believe it would make sense for IAR Systems to undergo such a transition in revenue mix to add visibility while potentially opening up for new customers that would not typically pay for its high-end licence products. However, such a transition would probably come at the expense of a short-term moderation in revenue growth and profitability (cloud revenue recognised over time versus perpetual upfront, in combination with increased investments to support cloud infrastructure).

Continued market consolidation among processor vendors

The ongoing consolidation trend among processor vendors could last longer than IAR Systems expects, which could continue to create market uncertainty and disrupt IAR Systems' partner network. We believe that a certain level of market fragmentation has been central to IAR Systems' competitiveness, as it has the broadest support in the market for different processor vendors and design architectures.

Business overview

Founded in 1983 by engineer Anders Rundgren, IAR Systems was provides world-leading software for programming processors in embedded systems (computer systems designed to perform a dedicated function in in a mechanical or electrical system). Its leading software tool chain - the IAR Embedded Workbench - facilitates, quality-assures, and improves the time-tomarket of programming instructions in 8-, 16-, 32- and 64-bit processors.

According to the company, individuals interact 30+ times a day with a product that is programmed by one of its loyal 46,000+ OEM customers (~95% recurring customers), or 150,000+ technology users found mainly in the automotive, industrial automation, medical technology, and consumer electronics industries such as Denso, Bosch, ABB, Continental or Miele.

World-leading provider of software for programming processors in embedded systems, which enable the development of digital products

Figure 23: IAR Embedded Workbench in the customer's product development

Product developers use IAR Embedded Workbench to program the processor Before a processor can be used in a and give it the correct instructions to control the finished product. product, it needs to be programmed with the correct instructions.

Source: Company (underlying data), DNB Markets (graph structuring)

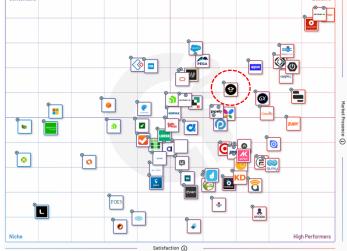

Headquartered in Uppsala, Sweden, IAR Systems has 200+ employees in 15 offices on three continents with technical support teams in its customers' local time zones in 10+ languages. Its independent software supports more than 14,000 processors from more than 70 vendors, more than any other supplier, meaning customers can choose the programming environment and tools according to their own needs regardless of processor or project. This avoids locking customers into one technical platform. Moreover, it can re-use 70-80% of previously developed code instead of rewriting it (saving time and resources).

Once the processor has been programmed, it is ready for the finished product.

Figure 24: Example of customers

Figure 25: Users view IAR Systems as a leader for low-code development platforms (2022)

Source: G2 Grid

Note: G2 scores products and sellers based on reviews gathered from its user community, as well as data aggregated from online sources and social networks; score is based on market presence and user satisfaction

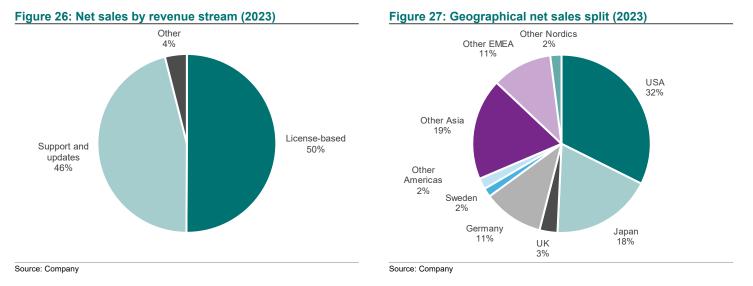

With almost 40 years' experience in the embedded industry, IAR Systems has built longstanding relationships and an extensive partner network, including: 1) suppliers of processors and architectures (Arm, RISC-V, Renesas, STMicroelectronics, etc.); 2) industry organisations for coding standards, certification, security compliance (TÜV SÜD, CERT C, MISRA, IoT Security Foundation, etc.); 3) services vendors (cloud services vendors, programming

Long-standing embedded industry partnerships

companies, etc.); and 4) suppliers of integrated programmes (real-time operating systems, graphics development, etc.).

IAR Systems' business model is primarily licence- and transaction-based, where customers (users, developers) pay upfront for a right-to-use licences (perpetual software keys) to access the software, while the customer can add support and updates for an annual cost of ~20% of the licence price. This means IAR Systems depends on selling new licences to facilitate growing net sales, we believe.

- Development tools (~99% of 2023 net sales) consist of IAR Embedded Workbench (8- to 64-bit) with world-leading code-optimisation technology, compiler, debugger probes and analysis tools (ensuring code quality and coding standards), functional safety certifications (pre-certified build tools), RISV-V architecture, and a Linux offering for continuous integration.
- Security solutions (~1% of 2023 net sales) consist of: 1) Embedded Trust, which enables the security specialist in an organisation to set security guidelines in accordance with company policy; 2) C-Trust, which makes it possible for developers to prepare encrypted code that automatically follows the prevailing security guidelines; and 3) Secure Desktop Provisioner, which helps OEM customers to securely programme products by giving each device a unique identity. The medium-term embedded security market opportunity with an 'out of the box' solution for mainstream MCUs appears likely to be beneficial for IAR, especially in device production as opposed to product development (royalty-based instead of licences). However, it will probably take time for security regulations and standards to significantly affect the marketplace.

Perpetual licence-based business model with ~40% recurring revenues

| Coverage by Analyst: | Joachim Gunell | | | |
| Date: | 28/10/2024 | | | |

This report has been prepared by DNB Markets, a division of DNB Bank ASA. DNB Bank ASA is a part of the DNB Group. This report is based on information obtained from public sources that DNB Markets believes to be reliable but which DNB Markets has not independently verified, and DNB Markets makes no guarantee, representation or warranty as to its accuracy or completeness. This report does not, and does not attempt to, contain everything material which there is to be said about the Company. Any opinions expressed herein reflect DNB Markets' judgement at the time the report was prepared and are subject to change without notice. The report is planned updated minimum every guarter.

Any use of non-DNB logos in this report is solely for the purpose of assisting in identifying the relevant issuer. DNB is not affiliated with any such issuer.

This report is for clients only, and not for publication, and has been prepared for information purposes only by DNB Markets, a division of DNB Bank ASA.

This report is the property of DNB Markets. DNB Markets retains all intellectual property rights (including, but not limited to, copyright) relating to the report. Sell-side investment firms are not allowed any commercial use (including, but not limited to, reproduction and redistribution) of the report contents, either partially or in full, without DNB Markets' explicit and prior written consent. However, buy-side investment firms may use the report when making investment decisions, and may also base investment advice given to clients on the report. Such use is dependent on the buy-side investment firm citing DNB Markets as the source.

Risk warning – generally high risk

The risk of investing in financial instruments is generally high. Past performance is not a reliable indicator of future performance, and estimates of future performance are based on assumptions that may not be realised. When investing in financial instruments, the value of the investment may increase or decrease, and the investor may lose all or part of their investment. Careful consideration of possible financial distress should be made before investing in any financial instrument.

Conflict of interest

This report has been commissioned and paid for by the company, and is deemed to constitute an acceptable minor non-monetary benefit as defined in MiFID II.

Readers should assume that DNB Markets may currently or may in the coming three months and beyond be providing or seeking to provide confidential investment banking services or other services to the company, and may receive compensation for these services.

Legal statement

This Report is a research report within the meaning of Regulation (EU) NO 596/2014 on market abuse (Market Abuse Regulation), and has been prepared in accordance with rules set out in relevant industry standards issued by The Norwegian Securities Dealers Association. This Report has been prepared as general information and is therefore not intended as a personal recommendation of particular financial instruments or strategies, and does not constitute personal investment advice as defined the Norwegian securities trading act (Norwegian verdipapirhandelloven).

The analyst hereby certifies that (i) the views expressed in this report accurately reflect that research analyst's personal views about the company and the securities that are the subject of this report, and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report. DNB Markets employees, including research analysts, may receive compensation that is generated by overall firm profitability. Confidentiality rules and internal rules restricting the exchange of information between different parts of DNB Markets/DNB Bank ASA or the DNB Group are in place to prevent employees of DNB Markets who are preparing this report from utilizing or being aware of information available in the DNB Group that may be relevant to the recipients' decisions. DNB Markets and the DNB Group have incorporated internal rules and regulations in order to avoid any potential conflicts of interest.

The Report has been prepared by DNB Markets, a division of DNB Bank ASA, a Norwegian bank organized under the laws of the Kingdom of Norway and under supervision by the Norwegian Financial Supervisory Authority, The Monetary Authority of Singapore, and on a limited basis by the Financial Conduct Authority and the Prudential Regulation Authority of the UK, and the Financial Supervisory Authority of Sweden. Details about the extent of our regulation by local authorities outside Norway are available from us on request.

It is issued subject to the General Business Terms for DNB Markets and information about the terms is available at www.dnb.no. For requests regarding the General Business Terms of the Singapore Branch of DNB Bank ASA, please contact +65 6212 6144. Information about the DNB Group can be found at www.dnb.no. DNB Markets is a member of The Norwegian Securities Dealers Association, which has issued recommendations and market standards for securities companies. The Association's Internet address where the recommendations and market standards can be found is: www.vpff.no. This report is not an offer to buy or sell any security or other financial instrument or to participate in any investment strategy. No liability whatsoever is accepted for any direct or indirect (including consequential) loss or expense arising from the use of this report. Distribution of research reports is in certain jurisdictions restricted by law. Persons in possession of this report should seek further guidance regarding such restrictions before distributing this report. Please contact the DNB Markets analyst named on the front page of this report for further information and enquiries about this report.

Additional information for clients in Singapore

The report has been distributed by the Singapore Branch of DNB Bank ASA. It is intended for general circulation and does not take into account the specific investment objectives, financial situation or particular needs of any particular person. You should seek advice from a financial adviser regarding the suitability of any product referred to in the report, taking into account your specific financial objectives, financial situation or particular needs before making a commitment to purchase any such product. You have received a copy of the report because you have been classified either as an accredited investor, an expert investor or as an institutional investor, as these terms have been defined under Singapore's Financial Advisers Act (Cap. 110) ("FAA") and/or the Financial Advisers Regulations ("FAR"). The Singapore Branch of DNB Bank ASA is a financial adviser exempt from licensing under the FAA but is otherwise subject to the legal requirements of the FAA and of the FAR. By virtue of your status as an accredited investor or as an expert investor, the Singapore Branch of DNB Bank ASA is, in respect of certain of its dealings with you or services rendered to you, exempt from having to comply with certain regulatory requirements of the FAA and FAR, including without limitation, sections 25, 27 and 36 of the FAA. Section 25 of the FAA requires a financial adviser to disclose material information concerning designated investment products which are recommended by the financial adviser to you as the client. Section 27 of the FAA requires a financial adviser to have a reasonable basis for making investment recommendations to you as the client. Section 36 of the FAA requires a financial adviser to include, within any circular or written communications in which he makes recommendations concerning securities, a statement of the nature of any interest which the financial adviser (and any person connected or associated with the financial adviser) might have in the securities. Please contact the Singapore branch of DNB Bank ASA at +65 6212 6144 in respect of any matters arising from, or in connection with, the report. The report is intended for and is to be circulated only to persons who are classified as an accredited investor, an expert investor or an institutional investor. If you are not an accredited investor, an expert investor or an institutional investor, please contact the Singapore Branch of DNB Bank ASA at +65 6212 6144. We, the DNB group, our associates, officers and/or employees may have interests in any products referred to in the report by acting in various roles including as distributor, holder of principal positions, adviser or lender. We, the DNB group, our associates, officers and/or employees may receive fees, brokerage or commissions for acting in those capacities. In addition, we, the DNB group, our associates, officers and/or employees may buy or sell products as principal or agent and may effect transactions which are not consistent with the information set out in the report.

In the United States

Each research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the views expressed in this report accurately reflect that research analyst's personal views about the company and the securities that are the subject of this report; and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

The research analyst(s) named on this report are foreign research analysts as defined by FINRA Rule 1050. The only affiliate contributing to this research report is DNB Bank through its DNB Markets division ("DNB Markets/DNB Bank"); the foreign research analysts employed by DNB Markets/DNB Bank are named on the first page; the foreign research analysts are not registered/qualified as research analysts with FINRA; foreign research analysts are not associated persons of DNB Markets, Inc. and therefore are not subject to the restrictions set forth in FINRA Rules 2241 and 2242 regarding restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

This is a Third Party Research Report as defined by FINRA Rules 2241 and 2242. Any material conflict of interest that can reasonably be expected to have influenced the choice of DNB Markets/DNB Bank as a research provider or the subject company of a DNB Markets/DNB Bank research report, including the disclosures required by FINRA Rules 2241 and 2242 can be found above.

This report is being furnished solely to Major U.S. Institutional Investors within the meaning of Rule 15a-6 under the U.S. Securities Exchange Act of 1934 and to such other U.S. Institutional Investors as DNB Markets, Inc. may determine. Distribution to non-Major U.S. Institutional Investors will be made only by DNB Markets, Inc., a separately incorporated subsidiary of DNB Bank that is a U.S. broker-dealer and a member of the Financial Industry Regulatory Authority ("FINRA") and the Securities Investor Protection Corporation ("SIPC").

Any U.S. recipient of this report seeking to obtain additional information or to effect any transaction in any security discussed herein or any related instrument or investment should contact DNB Markets, Inc., 30 Hudson Yards, 81st Floor, New York, NY 10001, telephone number +1 212-551-9800.
