DNB Markets

IAR SYSTEMS Strongest ever quarter

IAR's Q4 results were strong across the board despite tough YOY comparables, with encouraging early signals of commercial traction for its SaaS offering and longawaited milestone deals in security. As IAR launches its long-awaited SaaS transition in 2025e, we expect earnings to come under pressure short-term, but its defensive recurring revenues, strong balance sheet and share buybacks should mitigate share-price volatility. We have raised our 2025e adj. EPS by 2% and reiterate our fair value of SEK160–265.

Broad-based Q4 beat. Organic sales growth was 5% YOY (11% net sales beat versus our forecast), with Asia leading the way (+18% organic growth YOY), benefiting from increased geopolitical tensions as China now comprises ~10% of IAR's sales, two milestone deals in security (from a low base), and eight pre-commercial SaaS wins to test the offering. A 97% gross margin and tight opex control translated into 64% adj. EBIT drop-through, which led to adj. EBIT 54% above our forecast (27.3% margin, up 1.8%-points YOY). 50% cash conversion (18.9% FCF margin) led to net cash of SEK111m at end-Q4, and IAR has completed share buybacks worth SEK104m since Q3 2023 (owns 7.7% of its outstanding shares and should cancel these, in our view).

We have raised our 2025e adj. EPS by 2%, as we do not extrapolate the Q4 strength at this stage. This would suggest -3% organic sales growth YOY and -43% adj. EPS growth in 2025e to factor in the SaaS transition, on: 1) a 2% sales CAGR in 2024–2028e; 2) SaaS revenues representing ~60% of 2028e net sales; and 3) an earnings trough for 2026e. Our estimates could prove too conservative, but we prefer to take a prudent stance.

SEK160–265 fair value reiterated, with the low end based on a 2025e EV/EBIT of 20x (SaaS shift-pressured earnings) and the high end on a DCF that captures IAR's targeted 'rule of 40' financials beyond 2028–2030e (20%+ sales growth at a 20%+ EBIT margin). On a perpetual-licence basis, the shares would be trading at a 2025e EV/EBIT of ~11x.

Overview

Source: FactSet, DNB Markets

Downside risks to our fair value

- Weakening of the embedded systems developer community (C/C++ language difficulty, cultural shifts in the workforce, low-level code abstraction, artificial intelligence etc.).
- Competitive advantages disrupted by open-source alternatives or stronger commercial technologies.
- New product developments are too costly and might not translate into sales, which could make investors lose trust in the company's ability to resurrect its organic growth profile.
- IAR Systems is highly sensitive to a strengthening of the SEK (particularly against the USD, EUR, and JPY).

DNB Markets estimates

- IAR Systems is a market leader in a niche industry (ensuring high code quality in embedded software and programming secure devices).
- We believe IAR Systems is in the best shape operationally in the seven years we have covered the company. As it begins its long-awaited SaaS transition in 2025e to position the company for 'rule of 40' credentials, we expect short-term margin pain for a long-term earnings quality gain.
- We expect 2025e adj. EBIT to fall 43% YOY but believe IAR could become a 20%+ sales growth company once the SaaS shift is completed in 3–5 years.

Source: DNB Markets

Valuation methodology

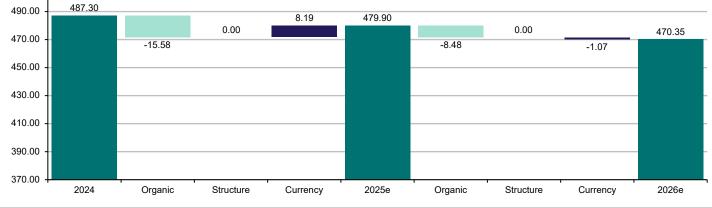

- We continue to base our fair value on a DCF, IAR Systems' historical valuation multiples, and a peers' multiples regression analysis (methodology unchanged).
- Our 5-year value gap potential (including a successful SaaS transition and FCFs redeployed in tuck-in M&A and continued share buybacks, yields SEK485/share in a positive scenario).
- On our estimates, IAR Systems is trading at 2025–2026e P/Es of 21– 24x, EV/EBIT of 15–17x

Source: DNB Markets

Upside risks to our fair value

- The company over-achieving on its financial targets (particularly 20% organic growth post SaaS shift).
- Successful traction of its new offerings (SaaS, MPUs, IoT security, RISC-V, 64-bit.) could offer potential value creation beyond our fair value.
- IoT security legislation that requires identity to be built into microcontrollers.
- SaaS transition would support the revenue mix, lessen the cyclicality, and enhance the investment profile.
- Participation in industry consolidation owing to the strategic importance of development tools.

Company overview and SWOT analysis

Company description

- IAR Systems is a world-leading provider of commercial software tools and services for programming processors in embedded systems (computer hardware and software designed for a specific function) that enable the development and ensure the code quality of digital products. Its solutions support 15,000+ processors from 200+ chip vendors globally.
- Its professional customers are mainly developers (30,000 users) at OEMs building these systems for products going into its focus markets with a higher degree of certifications and regulations: automotive, medical and industrial automation.

Source: DNB Markets

Financial targets

3-5 year targets:

- 20% annual sales growth in local currencies (organic) after its SaaS shift is completed in 3–5 years.
- EBIT margin of 20%+.

Source: Company

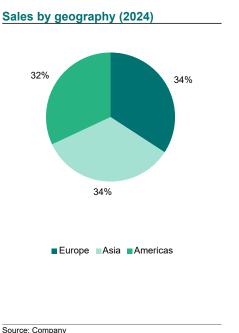

SWOT analysis

Strengths

- Niche-market leader with ~40% market share for commercial tools through its integrated development environment (IDE).
- Key competitive advantages are: 1) complete toolchain for developers regardless of processor/architecture and independent market position; and 2) superior industrial-quality, as its commercial customers cannot compromise on tools' code performance, reliability (industry standards compliance etc.), user-friendliness, access to support, or time-to-market.

Opportunities

- Early leader in some of the embedded industry's most prominent themes (multi-core support, embedded IoT security, safety and compliance, RISC-V, Rust, MPUs).
- Perpetual licences still make up 50%+ of IAR Systems' sales. We prefer subscription-based revenue models versus traditional perpetual licence delivery models, since the SaaS model generates more predictable revenue and cash flow, with the potential to become more profitable longer-term.

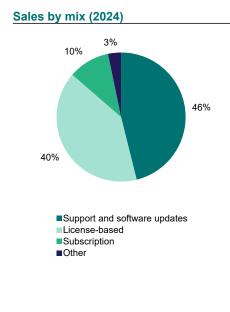

■ CEO – Cecilia Wachtmeister (since

CFO – Ann Zetterberg (since 2021).

Source: Company

Weaknesses

History of bad capital allocation in search of growth opportunities outside its core Embedded Workbench (~SEK200m Secure Thingz acquisition in 2018). That said, under its new leadership, IAR Systems has been more shareholder-friendly, with dynamic capital allocation through share buybacks.

Threats

- Competitive shift as open-source-based alternatives could gain popularity, as younger generations of developers could be unwilling to pay for licences or be restricted to a single technology from one vendor.
- OEMs and processor manufacturers might prefer high-level tools that can abstract out the lower-level hardware and software in product development.

ESG overview

Sustainability assessment

| | Positive | Negative |
|-----------------------------------|--|---|
| Conclusions | IAR Systems' software-development tools are market-leading in code quality, analysis, functional safety, and security. Its software ensures that the code is in line with industry standards, thereby guaranteeing its reliability when applied. | Data loss or security bugs in the software code could trigger regulatory scrutiny as well as legal costs and reputational damage, hampering its growth prospects. IAR Systems' competitiveness relies greatly on its |
| | Increased IoT security legislation drives demand for its products, as its OEM customers must comply with new security design requirements. | ability to continuously innovate. For this, its highly skilled workforce is a key resource. Failure to attract and retain such professionals could lead to delays in innovation and a loss of market share. |
| Actions being taken by company | Embedded programmers need to protect their code from IP theft and illegal copying, as IoT security issues are becoming increasingly prevalent. Following the acquisition of Secure Thingz, IAR Systems' tools are increasingly linked to sustainability, as they help developers take control of security from inception in the IP throughout the lifecycle of a digital product. | IAR Systems' development tools are the most used in the embedded industry, owing to its leading optimisation technology, comprehensive debugger quality, and renowned technical support. This is confirmed by its loyal customer base (~5% annual customer churn). It has 30,000+ users, 95% of which recurring customers, we believe. |
| Key ESG drivers Short-term | IAR Systems' security offering (Secure Desktop Provisioner, Embedded Trust, and C-Trust) ensures that its customers' intellectual property is protected against IP theft, overproduction, and piracy, and that software updates can be managed in a secure fashion. In other words, it creates a secure infrastructure and protects its customers' digital products from sabotage programmes and data intrusion. | To stay ahead of the competition, IAR Systems relies heavily on its employees in the development and innovation of new technologies. Following the integration of Secure Thingz, IAR Systems' addressable market has expanded from application development into manufacturing and update management (the entire lifecycle of embedded systems). To keep pace with compactivity is a larger market it paede to rate in a larger market. |
| | Examples of customer use cases have included: a leading vending-machine provider, whose IP was stolen (stolen credit card and transaction details); a global white-goods company, whose stolen IP led to twice as many products being manufactured; and a leading door-sensor provider, whose IP was stolen internally, which led to direct revenue loss. | competition in a larger market, it needs to retain highly skilled software engineers, which could come at a higher cost than its traditional business. An increasingly larger part of IAR Systems could revolve around Cambridge-based Secure Thingz. This could create some corporate cultural challenges versus the Uppsala-based legacy business. |
| Long-term | Regulators are likely to play an active role in the long-term uptake of secure development tools. This should have an impact on programmers' designs, as applications need to remain secure across the entire lifecycle to comply with new legislation. We note legislative initiatives in Europe (UK government, ETSI, ENISA) and the US (California and Oregon IoT Security law, IoT Cybersecurity Improvement Act), and government initiatives across Singapore, Japan, South Korea. | Considering its offering of software development tools to over 30,000+ users as well as the sensitive nature of the data it handles, IAR Systems is exposed to possible hacking attempts and misappropriation of technological data. |

Summary of positives

Attractive position in a structural growth niche

Sweden-based IAR Systems is a world-leading provider of commercial software tools and services for programming processors in embedded systems (IAR Systems software helps developers to translate coding languages to optimised machine code for microcontrollers) that enable the development and ensure the code quality of digital products. Its professional customers are mainly developers (30,000+ technology users) at OEMs building these systems for products going mainly into its focus markets with a higher degree of certifications and regulations: automotive, medical and industrial automation. Although the niche for IAR Systems' addressable market is largely undefined, it has said it captures a ~40% market share for commercial tools. We note several prospects for the market to show a mid-to-high single-digit CAGR medium-term: 1) a continued increase in the number (and complexity) of embedded systems driven by the growth of IoT; 2) demand for reliable and advanced software tools that offer faster time-to-market and a complete development platform; and 3) a lack of software developers, which increases demand for more powerful software-development tools.

Market dynamics benefiting the market leader

In our view, IAR Systems' key competitive advantages stem from: 1) its complete toolchain for product developers across 8-, 16-, 32-, and 64-bit processors; 2) its independence, which enables it to support a wide range of design architecture – customers can choose the programming environment and tools according to their own needs, regardless of processor or project with multi-core capabilities (Arm + RISC-V), which avoids locking customers into one technical platform; and 3) superior industrial quality, as its commercial customers cannot compromise on tools' code performance, reliability, user-friendliness, or time-to-market by using inferior technologies, such as open-source alternatives. IAR Systems' solutions create codes that are compact, fast, and stable.

96%+ gross margins ensure high level of scalability

We are positive on IAR Systems' new strategy to focus on: 1) expanding its addressable markets (address more advanced MCUs and also MPUs, which represent ~40% of its current market that it does not target today); 2) widening the market reach by targeting focus verticals (higher degree of certifications and regulations) in automotive and industrial automation, and expanding its channel through distributors and partners; and 3) expanding its share of wallet with its existing customers through its new subscription offering, allowing access to its entire toolchain in a modern development environment, with the potential to add a consumption parameter (charge for build capacity). We believe IAR Systems' business model transition will allow for stronger financials medium-term, as it: 1) facilitates a more predictable (less lumpy = de-risks growth), recurring, and ultimately profitable revenue stream; and 2) enables a more rapid customer expansion and user adoption by lowering the upfront cost of deployments. With ~95% customer retention, we believe IAR Systems could scale up with its existing customer base, which, in combination with 96%+ gross margins, could provide a highly scalable cost structure as the SaaS shift is completed that could add a tailwind to significant margin expansion with high cash conversion.

More dynamic capital allocation

IAR Systems has a solid FCF profile and a strong balance sheet, and we are encouraged to see that it has become more dynamic in its capital allocation. In 2023–2024, the company bought back 5% of its outstanding shares and we believe it could sustain generous capital distributions despite being a growth company over the coming years. Keeping a 0.5x net cash/EBITDA constant from 2024 to 2028e could allow it to buy back ~30% of its outstanding shares, which could provide a cushion to its share price during the ongoing SaaS transition.

Sumary of negatives

Possible shift in the competitive landscape

IAR Systems holds leading positions across most processor types, but it still faces a highly competitive environment, particularly from the independent suppliers Green Hills Software, Wind River Systems, and Arm's development tool, Kiel, we believe. In addition, the increasingly strategic nature of development tools for many industries could attract competition from disruptive innovators or free, open-source-based alternatives, which are gaining popularity, as younger generations of developers could be unwilling to pay for licences or be restricted to a single technology from one vendor.

Potential weakening of the Embedded Workbench community

According to Slashdata, Grid Dynamics, and Evans Data Corporation, there were 13.3m active software developers writing in the C/C++ language of the ~29m active developers globally in 2024. However, C++ is relatively hard to master. As developers often understand all aspects of a programming language, the difficulty of the language may affect the future number of C++ developers. We view this as a challenge, especially if we see a wider push from processor manufacturers and OEMs to provide developers with high-level tools that can abstract out the lower-level hardware and software in product development.

Product development could prove too costly and not materialise in sales growth

We believe IAR Systems underinvested in 2015–2018, which drove a considerable EBIT margin and ROCE expansion up to 30%+, given the inherent scalability of the business model. However, as organic growth abated, IAR Systems underwent the most comprehensive investment phase in its nearly 40-year history to reignite sales growth, investing SEK500m+ over five years (2018–2022) in its security offering, 64-bit support, and RISC-V tools. As the company failed to commercialise its embedded security offering, it booked a SEK116m impairment of intangible development assets in Q4 2021 and another SEK290m in Q4 2023.

One of the most FX-sensitive stocks on the OMX Stockholm exchange

Although >98% of sales are from markets outside Sweden, we estimate ~40% of the fixed-cost base is denominated in SEK; thus, the company is sensitive to fluctuations in this currency. If the SEK were to strengthen by ~10% against its most important currencies (USD, EUR and JPY) as well as the GBP and KRW, we estimate a ~10% FX headwind to sales and a ~40% headwind to 2025e EBIT.

SaaS transition could depress earnings in the coming years

We prefer subscription-based revenue models to traditional on-premises perpetual licence delivery models, as the SaaS models tend to generate more predictable near-term revenue and cash flow, with, we believe, the potential to become more profitable long-term. We believe it makes sense that IAR Systems has started such a transition in revenue mix to add visibility while potentially opening up for new customers that would not typically pay for its high-end licence products. However, such a transition would probably come at the expense of a short-term moderation in revenue growth and profitability (cloud revenue recognised over time versus perpetual upfront, in combination with increased investments to support cloud infrastructure).

Continued market consolidation among processor vendors

The ongoing consolidation trend among processor vendors could last longer than IAR Systems expects, which could continue to create market uncertainty and disrupt IAR Systems' partner network. We believe a certain level of market fragmentation has been central to IAR Systems' competitiveness, as it has the broadest support in the market for different processor vendors and design architectures.

Business overview

Founded in 1983 by engineer Anders Rundgren, IAR Systems provides world-leading software for programming processors in embedded systems (computer systems designed to perform a dedicated function in a mechanical or electrical system). Its leading software tool chain – the IAR Embedded Workbench – facilitates, quality-assures, and improves the time-to-market of programming instructions in 8-, 16-, 32-, and 64-bit processors.

According to the company, individuals interact 30+ times a day with a product that is programmed by one of its loyal 46,000+ OEM customers (~95% recurring customers), or 30,000+ technology users found mainly in the automotive, industrial automation, medical technology, and consumer electronics industries such as Denso, Bosch, ABB, Continental, or Miele.

STEMS

Product developers use IAR Embedded Workbench to program the processor

and give it the correct instructions to control the finished product.

World-leading provider of software for programming processors in embedded systems, which enable the development of digital products

Figure 27: IAR Embedded Workbench in the customer's product development

Before a processor can be used in a product, it needs to be programmed with the correct instructions.

Source: Company (underlying data), DNB Markets (graph structuring)

Headquartered in Uppsala, Sweden, IAR Systems has 200+ employees in 15 offices on three continents with technical support teams in its customers' local time zones in 10+ languages. Its independent software supports more than 14,000 processors from more than 70 vendors, more than any other supplier, meaning customers can choose the programming environment and tools according to their own needs regardless of processor or project. This avoids locking customers into one technical platform. Moreover, it can re-use 70–80% of previously developed code instead of rewriting it (saving time and resources).

Once the processor has been programmed, it is ready for the finished product.

Figure 28: Example of customers

Figure 29: Users view IAR Systems as a leader for low-code development platforms (2022)

Source: G2 Grid

Note: G2 scores products and sellers based on reviews gathered from its user community, as well as data aggregated from online sources and social networks; score is based on market presence and user satisfaction

With 40+ years' experience in the embedded industry, IAR Systems has built long-standing relationships and an extensive partner network, including: 1) suppliers of processors and architectures (Arm, RISC-V, Renesas, STMicroelectronics, etc.); 2) industry organisations for coding standards, certification, security compliance (TÜV SÜD, CERT C, MISRA, IoT Security Foundation, etc.); 3) services vendors (cloud services vendors, programming companies, etc.);

Long-standing embedded industry partnerships

and 4) suppliers of integrated programmes (real-time operating systems, graphics development, etc.).

Historically, IAR Systems' business model has been primarily licence- and transaction-based, where customers (users, developers) pay upfront for right-to-use licences (perpetual software keys) to access the software, while the customer can add support and updates. This means that IAR Systems has historically depended on selling new licences to facilitate growing net sales, we believe, but its subscription-offering launch in 2025 should allow it to build a larger share of recurring revenue:

- Licence-based (~45% of 2024 net sales) consist of IAR Embedded Workbench (8- to 64-bit) with world-leading code-optimisation technology, compiler, debugger probes and analysis tools (ensuring code quality and coding standards), functional safety certifications (precertified build tools), RISV-V architecture, and a Linux offering for continuous integration.
- Support and updates (~46% of 2024 net sales) consists of technical support services and update agreements, priced at an annual cost of ~20–25% of the perpetual licence price.
- Subscription (~5% of 2024 net sales) where IAR will offer its Embedded Workbench for Arm as a service through private or public clouds, on local computers or as a hybrid solution. This SaaS offering provides a greater flexibility for the users as it can scale up and down the number of users with easier administration. In essence, IAR Systems intends to offer its complete toolchain, but unlike many SaaS transitions that are just about changing the revenue model, IAR Systems offers a higher value to its customers, simplifying collaboration and automation in cloud environments, with greater flexibility. Moreover, IAR Systems is set to charge not only for access to its platform, but also through consumption parameters related to the usage (developers pay for build capacity) where ultimately developers who want to debug the code more often, or with shorter time-to-market, can pay for this increased functionality.

Important Information

| Company: | IAR Systems |
|----------------------|----------------|
| Coverage by Analyst: | Joachim Gunell |
| Date: | 11/2/2025 |

This report has been prepared by DNB Markets, a division of DNB Bank ASA. DNB Bank ASA is a part of the DNB Group. This report is based on information obtained from public sources that DNB Markets believes to be reliable but which DNB Markets has not independently verified, and DNB Markets makes no guarantee, representation or warranty as to its accuracy or completeness. This report does not, and does not attempt to, contain everything material which there is to be said about the Company. Any opinions expressed herein reflect DNB Markets' judgement at the time the report was prepared and are subject to change without notice. The report is planned updated minimum every guarter.

Any use of non-DNB logos in this report is solely for the purpose of assisting in identifying the relevant issuer. DNB is not affiliated with any such issuer.

This report is for clients only, and not for publication, and has been prepared for information purposes only by DNB Markets, a division of DNB Bank ASA.

This report is the property of DNB Markets. DNB Markets retains all intellectual property rights (including, but not limited to, copyright) relating to the report. Sell-side investment firms are not allowed any commercial use (including, but not limited to, reproduction and redistribution) of the report contents, either partially or in full, without DNB Markets' explicit and prior written consent. However, buy-side investment firms may use the report when making investment decisions, and may also base investment advice given to clients on the report. Such use is dependent on the buy-side investment firm citing DNB Markets as the source.

Risk warning – generally high risk

The risk of investing in financial instruments is generally high. Past performance is not a reliable indicator of future performance, and estimates of future performance are based on assumptions that may not be realised. When investing in financial instruments, the value of the investment may increase or decrease, and the investor may lose all or part of their investment. Careful consideration of possible financial distress should be made before investing in any financial instrument.

Conflict of interest

This report has been commissioned and paid for by the company, and is deemed to constitute an acceptable minor non-monetary benefit as defined in MiFID II.

Readers should assume that DNB Markets may currently or may in the coming three months and beyond be providing or seeking to provide confidential investment banking services or other services to the company, and may receive compensation for these services.

Legal statement

This Report is a research report within the meaning of Regulation (EU) NO 596/2014 on market abuse (Market Abuse Regulation), and has been prepared in accordance with rules set out in relevant industry standards issued by The Norwegian Securities Dealers Association. This Report has been prepared as general information and is therefore not intended as a personal recommendation of particular financial instruments or strategies, and does not constitute personal investment advice as defined the Norwegian securities trading act (Norwegian verdipapirhandelloven).

The analyst hereby certifies that (i) the views expressed in this report accurately reflect that research analyst's personal views about the company and the securities that are the subject of this report, and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report. DNB Markets employees, including research analysts, may receive compensation that is generated by overall firm profitability. Confidentiality rules and internal rules restricting the exchange of information between different parts of DNB Markets/DNB Bank ASA or the DNB Group are in place to prevent employees of DNB Markets who are preparing this report from utilizing or being aware of information available in the DNB Group that may be relevant to the recipients' decisions. DNB Markets and the DNB Group have incorporated internal rules and regulations in order to avoid any potential conflicts of interest.

The Report has been prepared by DNB Markets, a division of DNB Bank ASA, a Norwegian bank organized under the laws of the Kingdom of Norway and under supervision by the Norwegian Financial Supervisory Authority, The Monetary Authority of Singapore, and on a limited basis by the Financial Conduct Authority and the Prudential Regulation Authority of the UK, and the Financial Supervisory Authority of Sweden. Details about the extent of our regulation by local authorities outside Norway are available from us on request.

It is issued subject to the General Business Terms for DNB Markets and information about the terms is available at www.dnb.no. For requests regarding the General Business Terms of the Singapore Branch of DNB Bank ASA, please contact +65 6212 6144. Information about the DNB Group can be found at www.dnb.no. DNB Markets is a member of The Norwegian Securities Dealers Association, which has issued recommendations and market standards for securities companies. The Association's Internet address where the recommendations and market standards can be found is: www.yff.no. This report is not an offer to buy or sell any security or other financial instrument or to participate in any investment strategy. No liability whatsoever is accepted for any direct or indirect (including consequential) loss or expense arising from the use of this report. Distribution of research reports is in certain jurisdictions restricted by law. Persons in possession of this report should seek further guidance regarding such restrictions before distributing this report. Please contact the DNB Markets analyst named on the front page of this report for further information and enquiries about this report.

Additional information for clients in Singapore

The report has been distributed by the Singapore Branch of DNB Bank ASA. It is intended for general circulation and does not take into account the specific investment objectives, financial situation or particular needs of any particular person. You should seek advice from a financial adviser regarding the suitability of any product referred to in the report, taking into account your specific financial objectives, financial situation or particular needs before making a commitment to purchase any such product. You have received a copy of the report because you have been classified either as an accredited investor, an expert investor or as an institutional investor, as these terms have been defined under Singapore's Financial Advisers Act (Cap. 110) ("FAA") and/or the Financial Advisers Regulations ("FAR"). The Singapore Branch of DNB Bank ASA is a financial adviser exempt from licensing under the FAA but is otherwise subject to the legal requirements of the FAA and of the FAR. By virtue of your status as an accredited investor or as an expert investor, the Singapore Branch of DNB Bank ASA is, in respect of certain of its dealings with you or services rendered to you, exempt from having to comply with certain regulatory requirements of the FAA and FAR, including without limitation, sections 25, 27 and 36 of the FAA. Section 25 of the FAA requires a financial adviser to disclose material information concerning designated investment products which are recommended by the financial adviser to you as the client. Section 27 of the FAA requires a financial adviser to have a reasonable basis for making investment recommendations to you as the client. Section 36 of the FAA requires a financial adviser to include, within any circular or written communications in which he makes recommendations concerning securities, a statement of the nature of any interest which the financial adviser (and any person connected or associated with the financial adviser) might have in the securities. Please contact the Singapore branch of DNB Bank ASA at +65 6212 6144 in respect of any matters arising from, or in connection with, the report. The report is intended for and is to be circulated only to persons who are classified as an accredited investor, an expert investor or an institutional investor. If you are not an accredited investor, an expert investor or an institutional investor, please contact the Singapore Branch of DNB Bank ASA at +65 6212 6144. We, the DNB group, our associates, officers and/or employees may have interests in any products referred to in the report by acting in various roles including as distributor, holder of principal positions, adviser or lender. We, the DNB group, our associates, officers and/or employees may receive fees, brokerage or commissions for acting in those capacities. In addition, we, the DNB group, our associates, officers and/or employees may buy or sell products as principal or agent and may effect transactions which are not consistent with the information set out in the report.

In the United States

Each research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the views expressed in this report accurately reflect that research analyst's personal views about the company and the securities that are the subject of this report; and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

The research analyst(s) named on this report are foreign research analysts as defined by FINRA Rule 1050. The only affiliate contributing to this research report is DNB Bank through its DNB Markets division ("DNB Markets/DNB Bank"); the foreign research analysts employed by DNB Markets/DNB Bank are named on the first page; the foreign research analysts are not registered/qualified as research analysts with FINRA; foreign research analysts are not associated persons of DNB Markets, Inc. and therefore are not subject to the restrictions set forth in FINRA Rules 2241 and 2242 regarding restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

This is a Third Party Research Report as defined by FINRA Rules 2241 and 2242. Any material conflict of interest that can reasonably be expected to have influenced the choice of DNB Markets/DNB Bank as a research provider or the subject company of a DNB Markets/DNB Bank research report, including the disclosures required by FINRA Rules 2241 and 2242 can be found above.

This report is being furnished solely to Major U.S. Institutional Investors within the meaning of Rule 15a-6 under the U.S. Securities Exchange Act of 1934 and to such other U.S. Institutional Investors as DNB Markets, Inc. may determine. Distribution to non-Major U.S. Institutional Investors will be made only by DNB Markets, Inc., a separately incorporated subsidiary of DNB Bank that is a U.S. broker-dealer and a member of the Financial Industry Regulatory Authority ("FINRA") and the Securities Investor Protection Corporation ("SIPC").

Any U.S. recipient of this report seeking to obtain additional information or to effect any transaction in any security discussed herein or any related instrument or investment should contact DNB Markets, Inc., 30 Hudson Yards, 81st Floor, New York, NY 10001, telephone number +1 212-551-9800.

In Canada
